

Submersible Pumps for Wastewater and Sewage

Simple in Design but Top in Quality

Cable Entry

Every cabtyre cable has an anti-wicking block at the cable entry section on the pump. This mechanism is such that a part of each conductor is stripped back and the part is sealed by molded rubber or epoxy potting which has flowed in between each strand of the conductor. This unique feature prevents wicking along the strand of the conductor itself.

Motor

The motor is a dry-type, squirrel-cage induction motor, housed in a watertight casing, and conforms to insulation classes B, E or F. In each of these insulation classes, all standard pumps can be used in ambient temperatures up to 40°C.

Mechanical Seal

The mechanical seal with two seal faces containing silicon carbide (SiC) is equipped with the oil chamber. The advantages of the seal are two-fold, it eliminates spring failure caused by corrosion, abrasion or fouling which prevents the seal faces from closing properly, and prevents loss of cooling to the bottom seal faces during run-dry conditions which causes the bottom seal to fail.

Oil Lifter (Patent Pending)

The Oil Lifter was developed as a lubricating device for the mechanical seal. Utilizing the centrifugal force of the shaft seal, the Oil Lifter forcibly supplies lubricating oil to the mechanical seal and continues to supply the oil to the upper seal faces even if lubricant falls below the rated volume. This amazingly simple device is not only reliably lubricates and cools down, but also retains the stable shaft seal effect and extends the inspection term.

Motor Protector

Use of a Circle Thermal Protector (CTP) in small pumps is advantageous in applications where a control panel is not likely provided. Integrated in the motor housing, the CTP directly cuts the motor circuit if excessive heat builds up or an overcurrent caused by an electrical or mechanical failure occurs.

A Miniature Thermal Protector (MTP) is embedded in each winding of the motor. These MTPs are connected in series, and their wires are led out of the motor. Should the winding temperature rise to the actuating temperature, the bimetal strip opens to cause the control panel to shut the power supply.

MTPs are supplied as standard on all 11 kW pumps or over. CTPs are supplied on smaller pumps.

Shaft

The high-tensile stainless steel shaft used on all pumps is designed to have adequate strength for the transmission of the full load. It is supported by C3 type, high-quality, deep-groove ball bearings.

Leakage Sensor

A stainless steel, electrode type leakage sensor is standardized for large pumps of 22 kW or over (excluding some models). It senses water incursion into the oil chamber and brings the pump to a halt with the help of a control panel.

GUIDE RAIL FITTING SYSTEM

The guide rail fitting system connects the pump to and from the piping easily just by lowering and hoisting the pump, allowing easy maintenance and inspection without the need to enter the sump.

TOS and TO

The TOS/TO is the standard guide rail fitting system made of cast-iron and is compatible with cast-iron pumps. Pumps having a discharge bore from 50 mm to 150 mm are available for the TOS, and from 200 mm to 800 mm are available for the TO (excluding some models).

TS

This compact guide rail fitting system is ideal for installing in prefabricated lift stations. Its discharge flange is compatible with major flange standards including ANSI 150lb, BS PN10 and DIN PN10. Pumps having a discharge bore from 50 mm to 100 mm are available for the TS (excluding some models).

TOK

Made of high-quality resin, the TOK is designed for lightweight, small pumps. Rubber bellows attached to the guide hook are inverted to the duckfoot bend when the pump starts operating. This eliminates leakage at the seal even if a lightweight pump is used in combination with the TOK.

AUTOMATIC MODEL

The automatic model has an integral control circuit and two float switches that operate at a low voltage. It operates automatically in response to the change in water levels.

This model can be identified by the suffix "A" and is available in the following pump series:

Series	Output Range
B	0.75 through 3.7kW
C	0.75 through 1.5kW
U	0.25 through 3.7kW
UZ	1.5 through 3.7kW
PU	0.15 through 3.7kW
PN	0.25 through 3.7kW
PSF	0.25 through 3.7kW
OM	0.15kW
SQ	0.25 through 0.4kW
TM	0.25 through 3.7kW

AUTO-ALTERNATION MODEL

The auto-alternation model is used along with an automatic model. The combinational use of these two pumps enables each pump to operate alternately without control panel.

The auto-alternation model has three floats and can be identified by the suffix "W". Refer to standard specifications for availability and model numbers. It is available in the same output range of the automatic pumps.

How the Auto-alternation Model Works

● Operation is enabled by merely connecting the power supply.

Primary Operation

1 Float 3 operates, and pump W starts to discharge water.

2 Water is discharged (water level falls).

3 Stop float 2 of pump W operates to end water discharge. At this time, alternation start float 3 of pump W rests for one discharge operation.

Secondary Operation

1 Start float 4 of pump A operates to start water discharge.

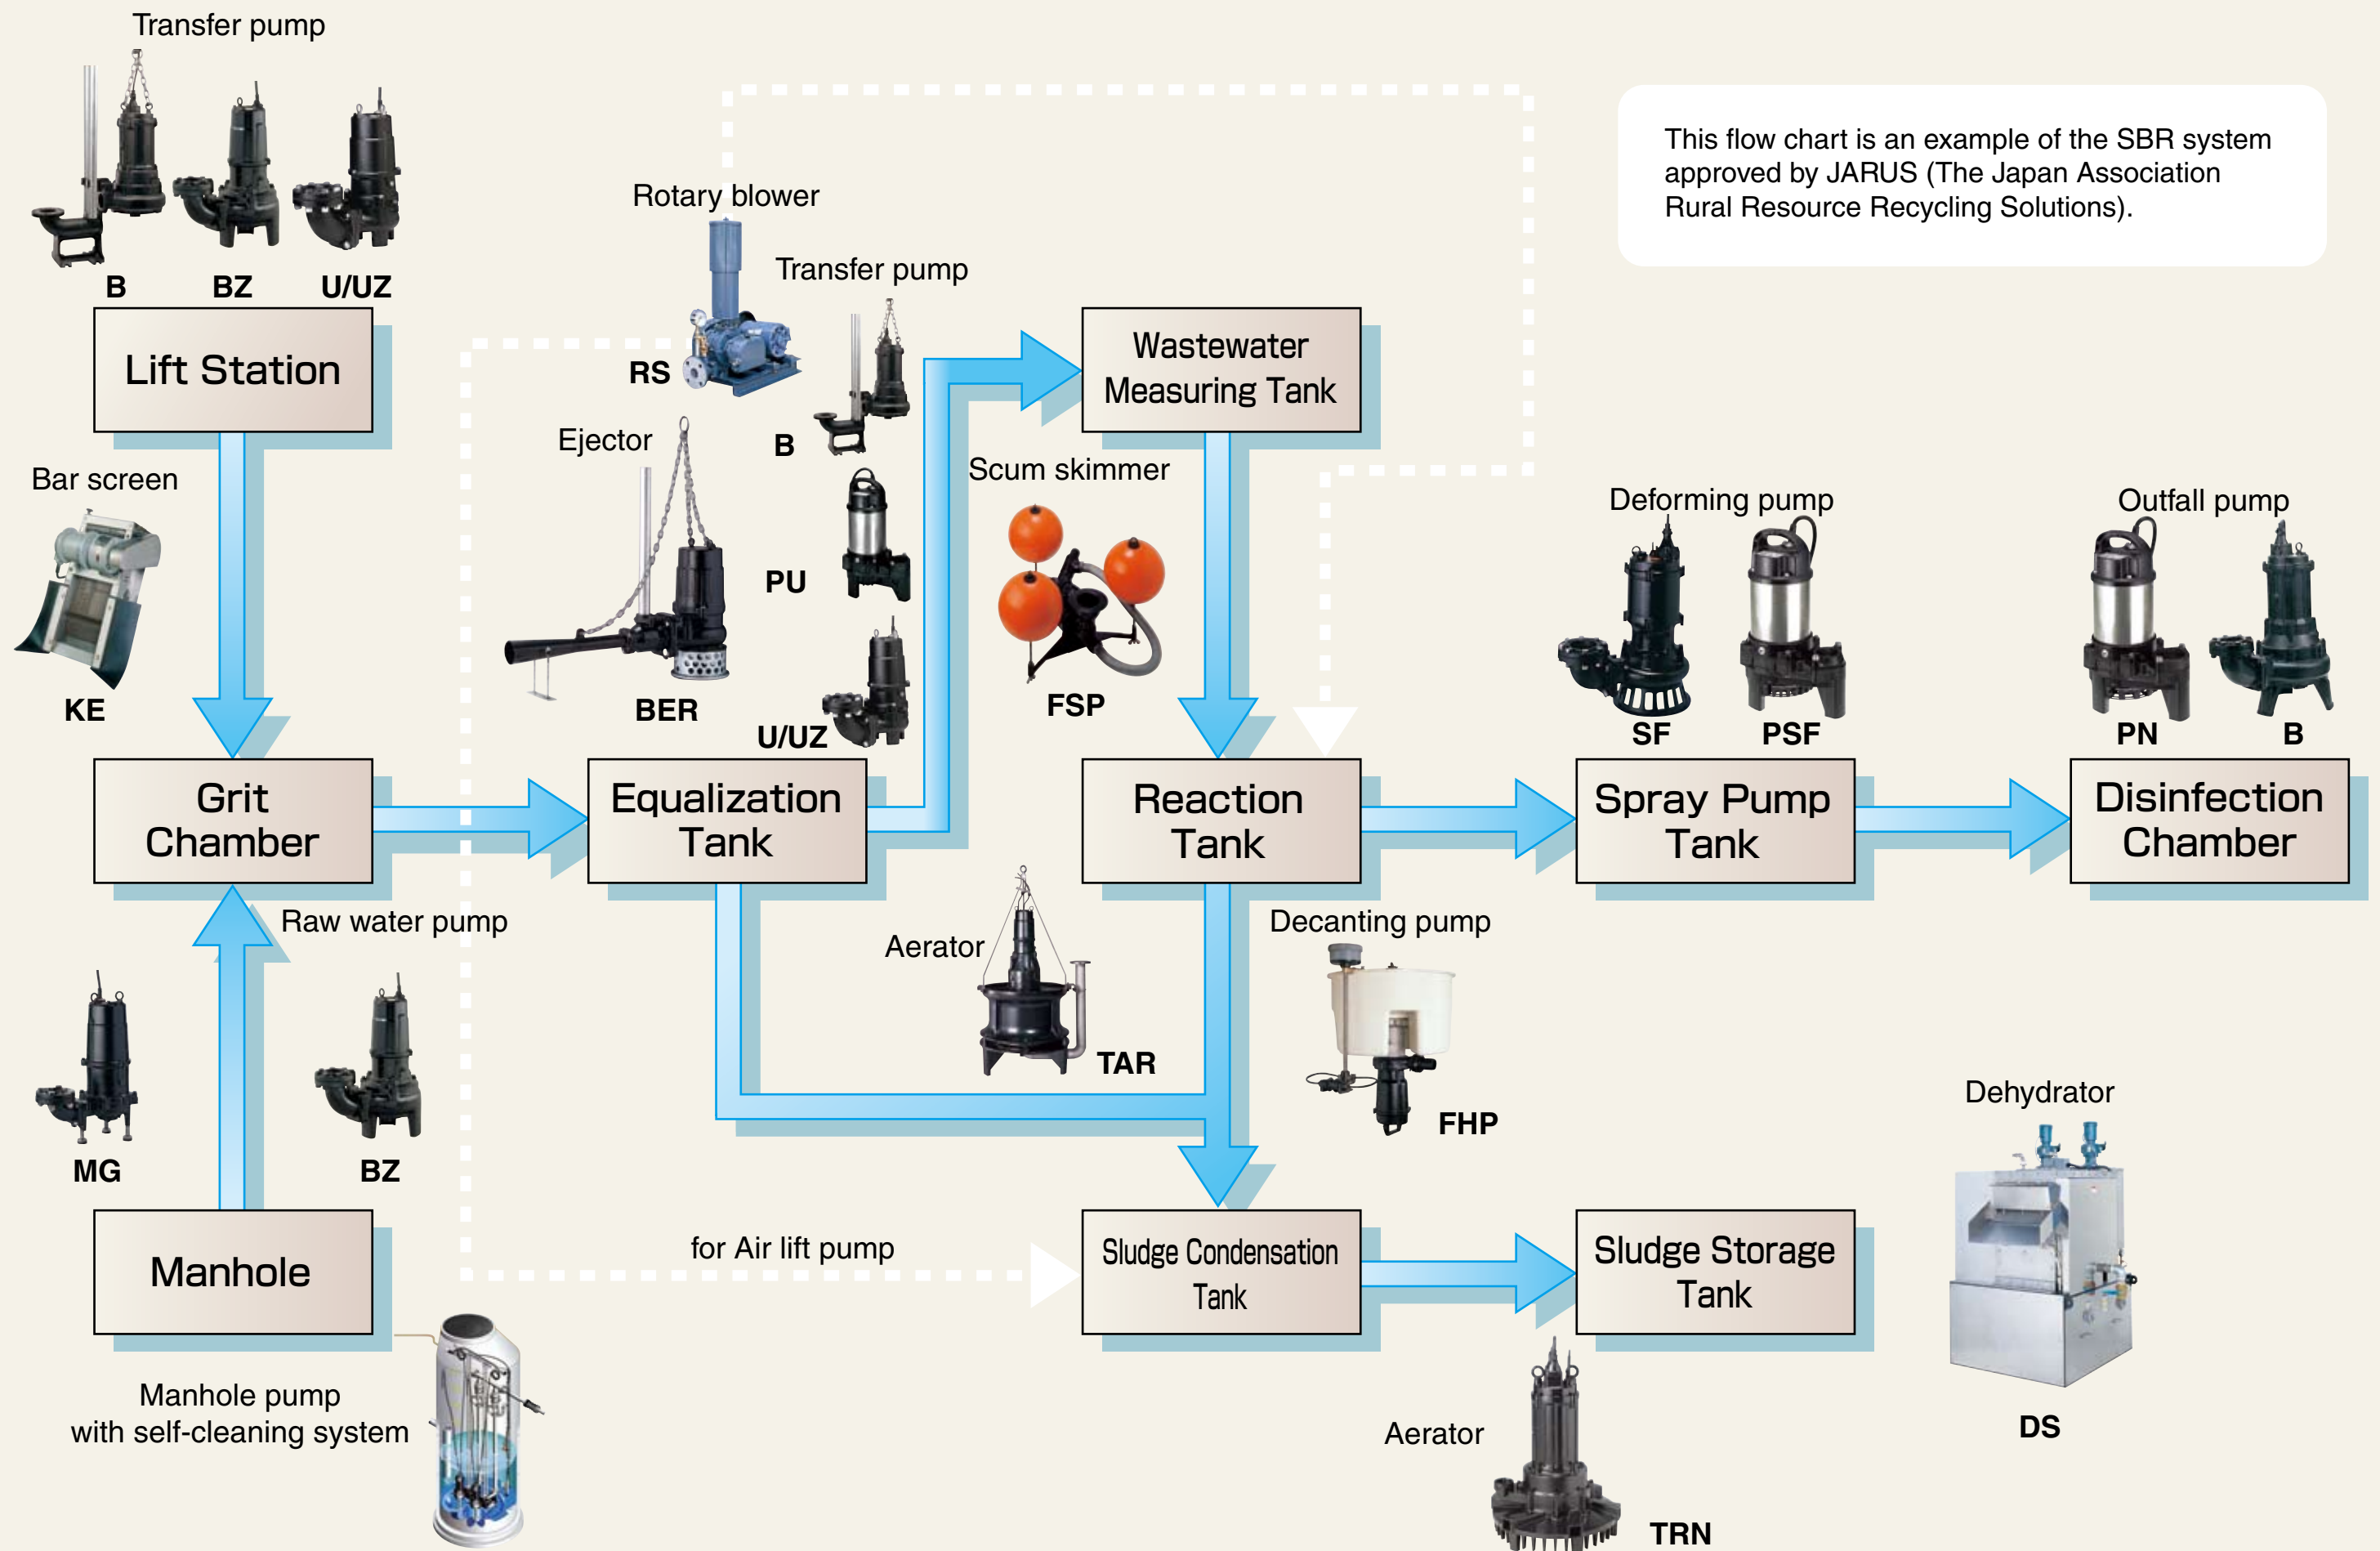

2 Water is discharged (water level falls).

3 Stop float 1 of pump A operates to end water discharge. At the same time, start float 3 of pump W becomes ready for operation.

※ Primary operation and secondary operation are repeated alternately.

※ Both primary and secondary operations are performed simultaneously when water has risen to an abnormal level.

Unequalled in variation, Tsurumi pumps answer

MAJOR IMPELLERS

CHANNEL

The impeller is semi-open or shrouded type with one or two vanes. It has a wide channel extending from inlet to exit, which allows the pump to pass the solid matters from inflow to discharge with minimal blockage.

CUTTER

The impeller is a semi-open type with a single vane. A sintered tungsten carbide alloy edge is brazed on an impeller vane, and it rotates on a saw-tooth suction port of a suction cover. This mechanism allows to cut up the foreign matters flowed into the impeller to discharge them.

VORTEX

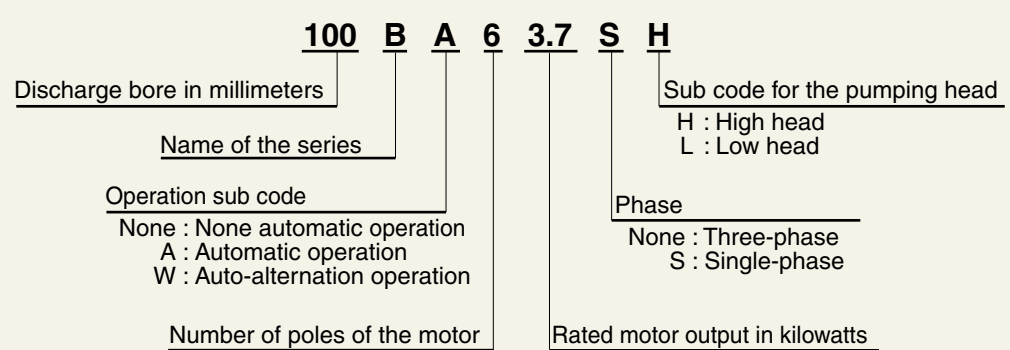

The impeller is a vortex type. The rotation of the impeller produces a whirling, centrifugal action between the impeller and pump casing. Being coupled with a wide pump casing, even large solids and fibrous matters can be pumped out without obstruction.

GRINDER

The grinder is made of high-chromium cast iron and is highly resistant to abrasion. The grinding mechanism is provided at the suction port of the pump. Flown in suspended solids are cut into small pieces and pumped out. This mechanism eliminates a fear of clogging in small diameter pipes.

MODEL NUMBER DESIGNATION

OPTIONS

Special Version with Galvanic Corrosion Protection

In sea water, the effect of galvanic corrosion is more serious than that of ordinary corrosion. When two different kinds of metals are dipped into an electrolytic liquid, a battery phenomenon occurs due to the difference in the electric potential of the two metals. In this case, the metal having the higher potential corrodes first. As an option, Tsurumi can supply pumps with parts made of higher electric potential metal as the sacrificial anode.

Special Version with Non-standard Materials

Tsurumi can also provide you with pumps with essential components such as the impeller, pump casing and suction cover made of non-standard materials. Select from stainless steel, chromium iron and bronze to suit your specific requirements. Consult your dealer for more details.

the most individual needs of every user

SERIES	BORE mm	OUTPUT kW	FEATURE	PAGE
SEWAGE / WASTEWATER				
B	50-800	0.4-110	Basic sewage pump with extensive variation	7-8

Special Version for Higher Temperature Liquids

Standard pumps are designed for continuous running at a maximum ambient temperature of 40°C. In addition to these, Tsurumi can provide pumps for operation at higher liquid temperatures upon request. Refitting for operation at higher temperatures involves modification of not only the insulation of motor windings but also several components.

Two high-temperature operation models are available-the Rank 60 for operation in liquids up to 60°C and the Rank 90 for operation in liquids up to 90°C. Consult your dealer for more details. (These special versions are not available for some pump models.)

B CHANNEL IMPELLER

The B-series is the basic model of the Tsurumi submersible sewage pumps, and it can be used for various kinds of field. A channel impeller practically prevents internal clogging and enables the pump to efficiently transfer sewage and wastewater containing solid matters. It is available as an extended line-up from 50 mm to 800 mm discharge bores.

BZ CHANNEL IMPELLER

The BZ-series has a proprietary single-channel, solid handling impeller that allows the pump to handle solid matters with up to 80 mm in diameter. The pump can efficiently transfer sewage and wastewater containing solid matters.

C CUTTER IMPELLER

The C-series incorporates a channel impeller with cutter mechanism that cuts up foreign matters sucked up with sewage to prevent the pump from clogging. The mechanism is composed of a sintered tungsten carbide alloy edge brazed on an impeller vane and a suction cover with a saw-tooth suction port.

U VORTEX IMPELLER

The U-series is a vortex pump powered by a 2-pole motor. The impeller produces vortex flow that allows fibrous materials and solid matters to be pumped out with minimum contact to the impeller. It offers a practically choking-free operation in sewage pumping.

UZ VORTEX IMPELLER

The UZ-series is a vortex pump driven by a 4-pole motor. It has a large solid passage that is equivalent to its discharge diameter and is excellent in the solid handling capability. It offers a practically choking-free operation in sewage pumping.

MG VORTEX IMPELLER

The MG-series has a grinding mechanism in its suction port, and it cuts incoming solid into small pieces. This enables the pump to transfer sewage via a small diameter pipe without the fear of clogging.

PU VORTEX IMPELLER

The PU-series is one of the Tsurumi VANCs-series. Being made of stainless steel and special resin, the pump is not only lightweight but corrosion-resistant as well. Built-in vortex impeller and large passage facilitate pump operations to readily dispose of liquid containing various kinds of foreign matters.

PN VORTEX IMPELLER

The PN-series is one of the Tsurumi VANCs-series. Being made of stainless steel and special resin, the pump is not only lightweight but corrosion-resistant as well. The semi-vortex pump design with moderate impeller passage provides efficient performance for versatile applications.

PSF CLOSED IMPELLER

The PSF-series is one of the Tsurumi VANCs-series. Being made of stainless steel and special resin, the pump is not only lightweight but corrosion-resistant as well. Built-in closed impeller generates the highest head in VANCs-series.

6	80SF27.5	80	7.5
7	80SF211	80	11

OM VORTEX IMPELLER

The OM3 and OMA3 are made of stainless steel and special resin. The pump is not only lightweight but corrosion-resistant as well. The semi-vortex pump design minimizes "impeller lock" that occurs when mixed in debris is about to impede impeller rotation. An automatic model uses a cylindrical float, allowing it to be installed in tight spaces.

EXPLOSION-PROOF

BX CHANNEL IMPELLER

The BX-series is the explosion-proof type of the B-series and is available for operating in an area in which an explosive atmosphere occurs occasionally. The pump conforms to the relevant EU directives and is certified by ATEX II 2 G Ex d IIB T4 standard.

Curve No.	Model	Discharge Bore mm	Motor Output kW
1	80BX21.6	80	1.6
2	100BX42.3	100	2.3
3	100BX43.8	100	3.8
4	100BX43.8H	100	3.8

The BX-series is available in 50Hz only.

CX CUTTER IMPELLER

The CX-series is the explosion-proof type of the C-series and is available for operating in an area in which an explosive atmosphere occurs occasionally. The pump conforms to the relevant EU directives and is certified by ATEX II 2 G Ex d IIB T4 standard.

Curve No.	Model	Discharge Bore mm	Motor Output kW
1	80CX21.6	80	1.6
2	100CX42.3	100	2.3
3	100CX43.8	100	3.8

The CX-series is available in 50Hz only.

UX VORTEX IMPELLER

The UX-series is the explosion-proof type of the U-series and is available for operating in an area in which an explosive atmosphere occurs occasionally. The pump conforms to the relevant EU directives and is certified by ATEX II 2 G Ex d IIB T4 standard.

Curve No.	Model	Discharge Bore mm	Motor Output kW
1	50UX21.6	50	1.6
2	80UX21.6	80	1.6
3	80UX22.4	80	2.4
4	80UX24.0	80	4.0

The UX-series is available in 50Hz only.

KTX SEMI-OPEN IMPELLER

The KTX-series is the explosion-proof type of the general dewatering pumps, KTZ-series. The pump is available for operating in an area in which an explosive atmosphere occurs occasionally. It is designed to conform class 2 Group 4 that is equivalent to d II T4.

Curve No.	Model	Discharge Bore mm	Motor Output kW
1	50KTX2.4S	50	0.4
2	50KTX21.5	80	1.5
3	80KTX23.7	50	3.7

TM VORTEX IMPELLER

The TM-series is one of the Tsurumi VANCs-series. Being all wetted parts made of titanium and special resin, the pump is not only lightweight but corrosion-resistant against seawater and fits marine use. In addition to the listed line-up from 0.25 kW to 1.5 kW models, 2.2 kW and 3.7 kW models are also available.

Curve No.	Model		Discharge Bore mm	Motor Output kW

TRN AERATOR

The TRN-series is a submersible aerator having a self-aspirating function. A built-in special semi-open impeller generates negative pressure, draws in air from above the water surface. The drawn air and liquid are mixed and discharged at a high pressure. This innovative mechanism contributes to highly efficient dissolution of oxygen.

Air Flow Rate – Water Depth Curves

(The air flow rates are expressed at the standard condition, i.e. temperature of 20°C, 1 atm and may vary by up to approx. 5%.)

Curve No.	Model	Air-inlet Bore mm	Motor Output kW
1	32TRN2.75	32	0.75
2	32TRN21.5	32	1.5
3	50TRN42.2	50	2.2
4	50TRN43.7	50	3.7
5	50TRN45.5	50	5.5
6	80TRN47.5	80	7.5
7	80TRN412	80	12
8	80TRN417	80	17
9	100TRN424	100	24
10	150TRN440	150	40

BER EJECTOR

The BER-series is a submersible ejector comprising a B-series sewage pump and a venturi-jet pump. It draws in air by means of its self-aspirating mechanism and discharges the mixture of air and water through the diffuser. The powerful single jet current is unrivaled in vertical stirring convection.

Air Flow Rate – Water Depth Curves

(The air flow rates are expressed at the standard condition, i.e. temperature of 20°C, 1 atm and may vary by up to approx. 5%.)

Curve No.	Model	Air-inlet Bore mm	Motor Output kW
1	8-BER4	25	0.75
2	15-BER3	32	1.5
3	22-BER5	50	2.2
4	37-BER5	50	3.7
5	55-BER5	50	5.5

FSP SCUM SKIMMER

The FSP-series is a scum skimmer, incorporating a jet injector. It guarantees a stable sucking process even if water, air, and suspended matters are drawn in from water surface simultaneously.

〈4-FSP2〉

〈8-FSP3〉

Model	Discharge Bore mm	Motor Output kW
4-FSP2	50	0.4
8-FSP3	50	0.75

FHP DECANTING PUMP

The FHP-series is a decanting pump, having a monitoring device for the sludge surface. The pump ensures that only supernatant liquid is discharged without any entrapment of sediment.

Curve No.	Model	Discharge Bore mm	Motor Output kW
1	FHP3-3 FHP3-3T	40	0.25
2	FHP2-4 FHP2-4T	50	0.4
3	FHP3-8T	50	0.75
4	FHP2-15T	80	1.5

TAR AERATOR

The TAR-series is a submersible aerator having an axial-flow impeller. The air supplied by a blower is broken into fine bubbles and is mixed with water by its strong water current. An extremely high oxygen transfer rate can be achieved with less energy consumption.

Air-inlet Bore : 65-200mm
Motor Output : 1.5-30kW

RS BLOWER

The RS-series is a rotary air blower with a 3-lobe rotor. A highly well-balanced rotor and innovative helical outlet port minimizes violent impact and pulsation noise. It is applicable to a wide variety of applications.

Discharge Bore : 20-150mm
Motor Output : 0.4-45kW
Air Volume : Max. 28m³/min
Discharge Pressure : Max. 58.8kPa

KE/KS/KM BAR SCREEN

The KE/KS/KM-series are automatic mechanical bar screens for removing solids before aeration. Bar spacing available is from 1 mm to 50 mm. All the major parts are made of 304 stainless steel. They are designed to be compact and easy to install.
